

AECON.AI

The agent is the new buyer. aecon is the economy behind it.

As autonomous software becomes the buyer of work, aecon enables traditional businesses to package their services into machine-callable products that AI agents can hire and settle directly.

Machine traffic has overtaken human traffic. The ad-funded internet is breaking.

For 30 years, web services monetized human attention via ads and referrals. When AI agents summarize and execute tasks directly, attention hits zero. The only surviving monetization model is charging the agent at the millisecond of the request.

60%

Machine traffic share
Bots & agents vs 38.2% human

4,200:1

Crawl-to-referral ratio
AI bots scrape with zero visits

-47%

Search clickthrough collapse
AI summaries intercept traffic

\$0.00

Ad revenue from agents
Bots don't click banners

02 / THE PROOF

Software is already paying software directly. Machine micropayments have arrived and scaled past 100M transactions on Base.

Software already pays for tools mid-task. But the rails are empty of real work.

The payment rails exist. But at an average ticket of 32 cents, agents only buy raw tokens and scraper proxies. They cannot buy commercial services because no market coordinates price, delivery, and trust.

x402 protocol metrics, 30 days to 25 Aug 2026. Chainalysis, Jun 2026.

03 / THE THESIS

Four structural shifts are arriving simultaneously. They point to one inevitable outcome: a new economic coordination layer.

The four-step chain that creates the Agentic Economy.

STEP 01

Software Has Agency

An agent working a task decides for itself which tools it needs mid-execution. It does not wait for a developer to integrate an API in advance.

STEP 02

Software Can Pay

Protocols like x402 let software meet a price and settle instantly on-chain. Software moved from choosing tools to buying them on demand.

STEP 03

Everyone Becomes a Seller

When there is a buyer that never sleeps and pays per call, every business with data or capability has an incentive to expose it to software.

STEP 04

A New Economy Needs a Market

The rails move money; gateways pass requests. But nobody coordinates binding price discovery, verified delivery, or reputation.

Just as App Stores turned smartphone users into buyers, autonomous agents turn software into the primary consumer of services. aecon is the market that coordinates them.

aecon core investment thesis, September 2026.

04

Agentic Economy
aecon.ai

04 / HISTORICAL PATTERN

Every platform shift forces capability to be re-packaged for the new buyer, and the platform that enables the transition captures the market.

Commercial history: Web E-commerce, App Stores, Programmatic Ad Exchanges.

05

Agentic Economy
aecon.ai

Every new buyer requires businesses to re-package how they sell.

THE NEW BUYER	HOW CAPABILITY WAS SOLD	THE PACKAGING TRANSITION	THE PLATFORM THAT WON
Web Shoppers (1995)	Physical retail & mail catalogs	Inventory re-packaged as web pages & online checkout	Amazon & Shopify
Smartphone Users (2008)	Desktop software & CD-ROMs	Software re-packaged as mobile-native apps	Apple & Google App Stores
Programmatic Bots (2012)	Direct insertion orders & emails	Ad inventory re-packaged into real-time API bids	DoubleClick & Ad Exchanges
Autonomous Agents (Today)	Phone calls, PDFs & 30-day terms	Services re-packaged as machine-callable Tools	aecon (Agentic Economy)

Payment rails only move money. aecon is the infrastructure that allows traditional businesses to turn their human capability into machine-callable productised services.

05 / THE MISSING PIECE

Markets require five pillars before supply switches on. In 2026, the agentic economy has rails and endpoints, but lacks the core commercial layer.

Five-things market framework: eBay, App Store, Airbnb, Upwork.

06

Agentic Economy
aecon.ai

A market cannot function without price discovery, delivery proof, and reputation.

1. Trusted Settlement	SOLVED	x402 on Base settles funds in milliseconds per request
2. Low Onboarding Friction	SOLVED	Any HTTP endpoint or cloud function can be published
3. Binding Price Discovery	MISSING	Agents encounter opaque rates or surprise invoices. Price must be bound upfront
4. Verified Delivery Evidence	MISSING	Payments settle even if an endpoint times out, hallucinates, or returns corrupt data
5. Portable Seller Reputation	MISSING	No verifiable track record of uptime, latency, and delivery accuracy across calls

aecon delivers the three missing pieces: binding quotes before invocation, cryptographic delivery verification, and reputation scores that track real execution.

06 / THE MARKET UNIT

Services cannot be traded by machines as vague websites or opaque LLM prompts. They must be packaged as bounded, callable Tools.

The Tool: the standardized unit of exchange for the agentic economy.

```
// One versioned, machine-purchasable Tool
tool: "operation:v1:c41f...9a2b" // Landgate: WA certificate of title search
  inputs:  { lot_on_plan: "Lot 402 on Diagram 18241", tenure: "freehold" },
  output:  { title_ref, registered_proprietor, encumbrances[], certificate_hash },
  price:   "$33.90 AUD" // regulated Landgate fee, bound before the Call,
  delivery: "≤ 90 s" // auto-cancel and refund on breach,
  remedy:   "reissue or full credit",
  evidence: { authority: "did:web:landgate.wa.gov.au", signature: "EIP-712" }
}
```

Crucial dynamic: the Tool contract works whether a person performs the work today or an automated model fulfills it tomorrow. The buyer receives the exact same schema, at the exact same price, with verified evidence.

aecon Tool schema specification.

07 / SUPPLY DEFENSIBILITY

Shoal Research and Cloudflare proved that static content loses pricing power instantly. Only three categories of supply can sustain machine monetization.

Static web data is dead. Only three things command a price from AI agents.

CATEGORY 01

Live, Ephemeral State

Real-time order books, power grid dispatch, live shipping rates, sub-second telemetry. An LLM cannot answer today's state from last month's training weights.

CATEGORY 02

Gated Offline Records

Statutory land titles, corporate share registers, court filings, private market cap tables. Information that never touches the open web and cannot be scraped.

CATEGORY 03

Licensed Human Authority

Fire engineering reviews, legal precedent opinions, geotechnical sign-offs. Outcomes that require licensed human accountability and professional standing.

aecon deliberately ignores generic web scraping and static articles. We anchor our marketplace entirely on the three categories that models cannot absorb for free.

Shoal Research, "How AI Is Breaking the Internet Economy", Sep 2026.

08 / BEACHHEAD

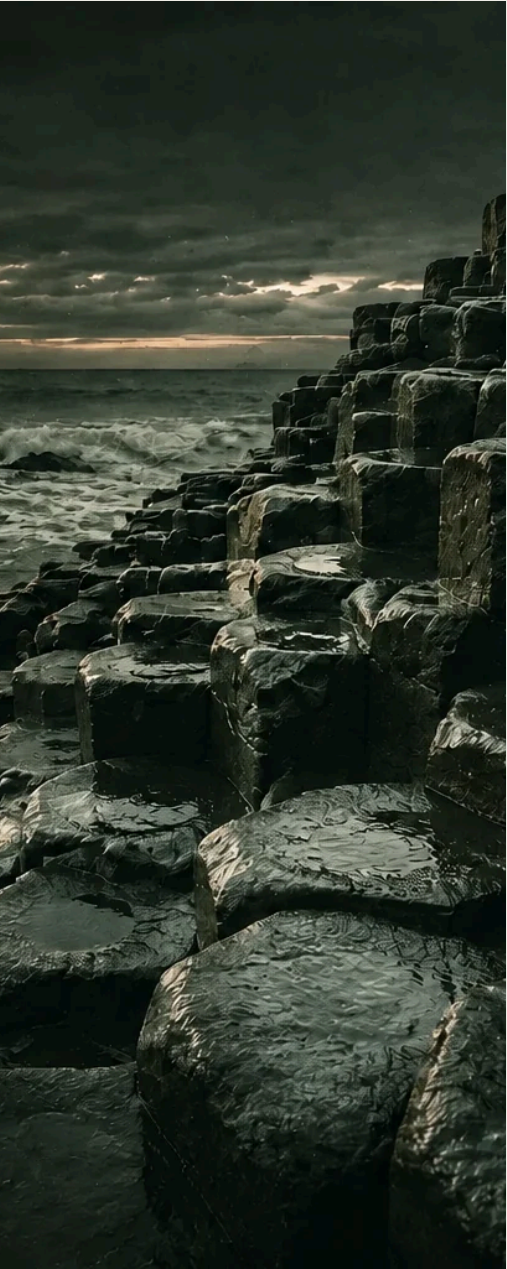

A national economy is the exact right size to prove a complete market of agents buying from suppliers runs as ordinary commerce.

Australia is the ideal testbed:
900,000 specialist firms, one
regulatory perimeter.

Australia is a nation of credentialed specialists: surveyors, labs, planners, engineers. Today, their capability is stranded in local postcodes. By structuring them as callable Tools, aecon turns an entire national economy into programmatic supply.

ABS Business Indicators 2025; Gartner
Cloud Forecast 2025.

09 / EXECUTION

The transaction engine is built and verified. The 2026 milestone is the first purchase resolution: executing the first complete trade between strangers.

Verified repository state, Sep 2026.
START_LINE.md criteria.

The engine is built. We are executing the first end-to-end commercial trade.

```
$ ae search --capability "land-titles"           # Discover callable Tool
$ ae call operation:v1:c41f...9a2b             # Landgate title search, verified x402 purchase
✓ Spending policy: Approved budget ceiling | Category authorized
✓ Upstream Settle: x402 challenge verified on Base (EIP-712 / did:web)
✓ Ledger Balance:  Formance double-entry engine debited AUD, reserved USDC
✓ Purchase resolution: Receipt hash validated, Australian Tax Invoice issued
```

THE ENGINE

Built & Running

19-command CLI, MCP endpoint, x402 verification, double-entry ledger. All operational in test environments.

THE SUPPLY BEACHHEAD

12 Mapped Registers

Landgate titles, ASIC registers, DWER contaminated sites, AEMO grid dispatch. Real data with statutory standing.

THE 2026 MILESTONE

Purchase Resolution

One outside firm converts its capability into a Tool, and a stranger's software buys it end-to-end.

A thesis is only as strong as its kill conditions. Here are the three structural tests that determine whether this market forms.

australia.md §8 failure modes and Shoal
Research 2026 market realities.

The three kill conditions for the agentic economy, and how we test them.

KILL CONDITION 01

The Scraping Trap

The Threat: If services provide static info, AI crawlers scrape them once and models answer for free forever.

The Falsifier: We only onboard *ephemeral state* and *statutory offline records* that require fresh runtime queries.

KILL CONDITION 02

The Demand Lag

The Threat: If autonomous enterprise agents take two years to arrive, machine purchasing volume stays near zero.

The Falsifier: Tools sell to human developers and software scripts today. We do not wait for autonomous agents.

KILL CONDITION 03

The SME Conversion Wall

The Threat: Small firms will not spend time drafting API schemas for speculative software revenue.

The Falsifier: aecon wraps existing web portals and handles contract mapping on the supplier's behalf.

Every parallel in history shows that exchanges take 3 to 5 years to mature. We test these three conditions across 10 core providers in 12 months.

11 / THE ASK

Pre-seed funding to execute the first 1,000 commercial trades across 10 core Australian statutory and professional providers.

Raising pre-seed capital to turn the traditional service economy into machine-callable supply.

THE ROUND

Pre-seed round via standard SAFE / Convertible Note.

12-MONTH TARGET

1,000+ paid commercial transactions across 10 onboarded Australian statutory, data, and engineering providers.

USE OF CAPITAL

Onboard the first 10 high-value WA data & consulting Tools; complete production settlement rails on Base.

STRATEGIC VALUE

Distribution across Base ecosystem & introductions to enterprise teams deploying autonomous agents.

The rails move money. aecon enables the supply. We are raising to turn it on.
